The convergence of technologies, generates convergence in the regulations

Guillermo Valdés Mesa
Havana
University Center Biomaterial

Abstract:
The convergence of nanotechnologies generates synergies among different technologies say, nanotechnologies, neurotechnology, computers and biotechnology, these technologies must converge in their regulations, the application of medical devices in nanotechnologies should lead us to a link between the technical committee TC 210 and ISO technical committee 229 link that does not exist in our work in this moment. In this do an analysis of the management of risk from an optical NC-ISO 14971. Studying the global trend in this respect as imported for manufacturers medical devices worldwide.
